ChangeCast

Forms are hard.

@jaredpalmer

y tho

```
handleChange = (event) => {
  this.setState({ value: event.target.value })
}

// ...

<input
  value={this.state.value}
  onChange={this.handleChange}
/>
```

@jaredpalmer

```
handleChange = (event) => {
  this.setState({ [event.target.name]: event.target.value })
}

// ..

<input
  name="firstName"
  value={this.state.firstName}
  onChange={this.handleChange}
/>

<input
  name="lastName"
  value={this.state.lastName}
  onChange={this.handleChange}
/>
```

@jaredpalmer

Why?

Wiring up state

Validation

Error messages

Testing

Focus management

Staying organized

“

**Form state is local and
ephemeral.**

—Dan Abramov

@jaredpalmer

Goals

Logic only

Solve for ~80% of use cases

“Battery Pack Included”

Incremental adoptable/deletable

No magic, just React!

@jaredpalmer

npmcharts

October 18th - 24th, 2019

581,155 formik

<Formik />

`<Formik />`

No external state management

No subscriptions or observables

No reinventing the wheel

...no tears

@jaredpalmer

Demo

What's new in Formik 2?

useField()

initialXXX props

useFormik()

validateOnMount

useFormikContext()

validateWithLowPriority

getFieldProps()

validateWithHighPriority

@jaredpalmer

Roadmap

Formik Native Release

useFieldArray()

MORE DOCS!

MORE EXAMPLES!

Accessibility Improvements

React Flare (v3)

@jaredpalmer

npm install formik
